

Antiemetics & Prokinetics

Jan Strojil

Ústav farmakologie LF UP

October 17, 2006

Outline

- ➊ Introduction - physiology
- ➋ Antidopaminergic
- ➌ Antihistaminic
- ➍ Anti 5-HT₃
- ➎ Antimuscarinic
- ➏ Other, Prokinetics & Emetics

Physiology

Vomiting: **forceful expulsion of the contents of one's stomach through the mouth** (wikipedia.org)

- **good** poison ingestion
 gastric irritation
- **bad** kinetosis
 gravidity
 chemotherapy (or other drugs)
 intracranial processes (↑ pressure)
 vestibular disorders

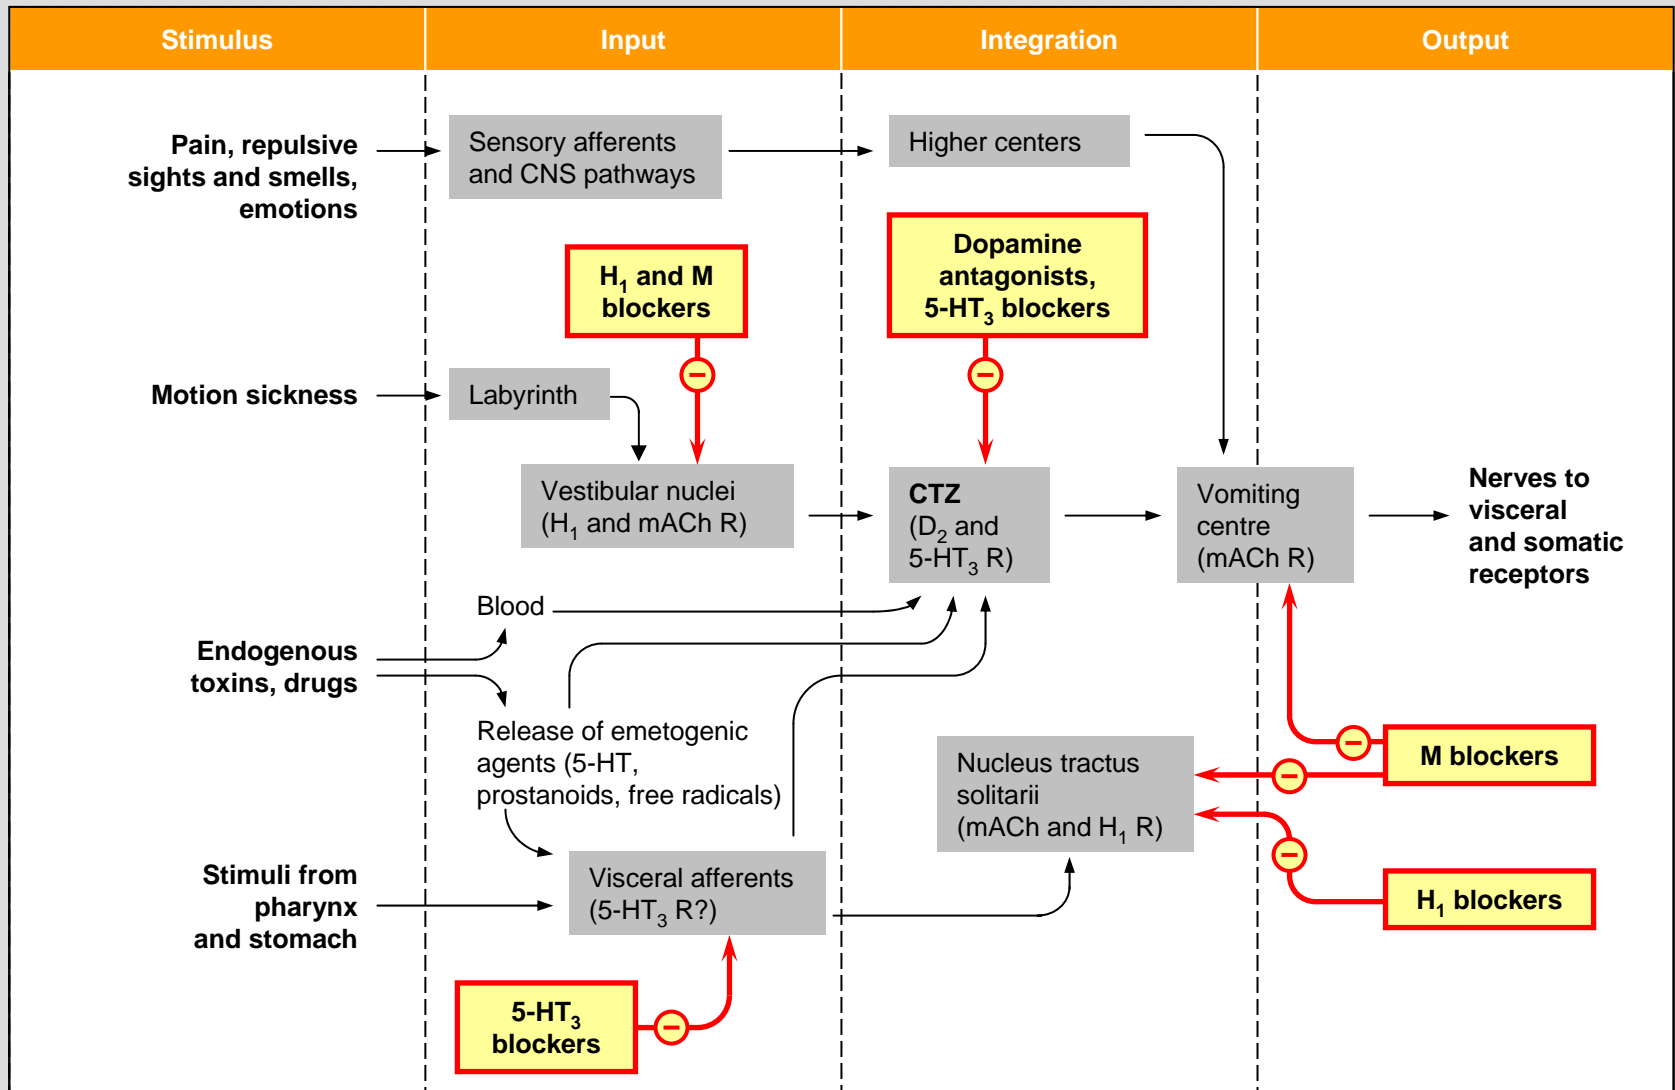

Physiology

Consequences of repeated vomiting

- hypochloremic metabolic alkalosis
- secondary hypokalemia (kidneys)
- teeth damage
- aspiration

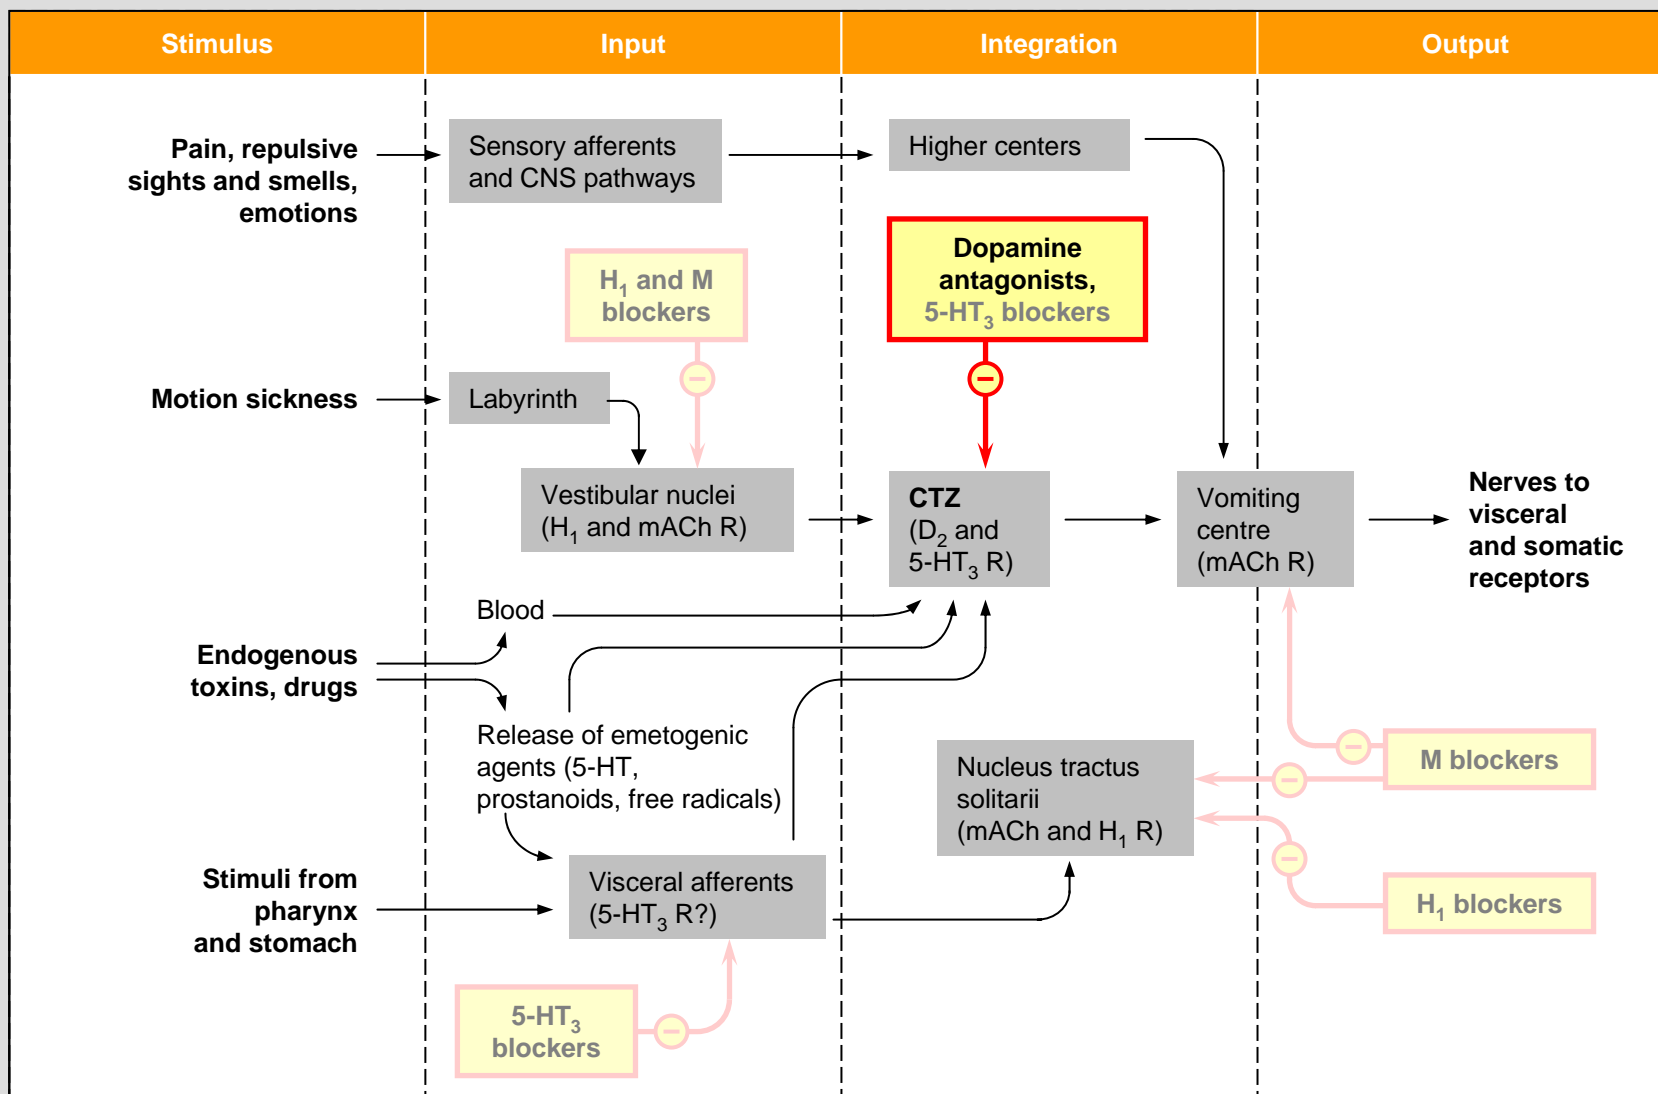

Physiology

Antidopaminergic

- 1 Introduction - physiology
- 2 Antidopaminergic**
- 3 Antihistaminic
- 4 Anti 5-HT₃
- 5 Antimuscarinic
- 6 Other, Prokinetics & Emetics

Physiology

Antidopaminergic - D₂ receptor blockers

- **mechanisms of action**
 - block transmission in CTZ
 - cancel dopamine inhibition of the stomach
 - in high doses also 5-HT₃
- **indications**
 - PONV
 - drug induced N/V
 - migraine
 - gastric paresis in DM
 - before GI radiology (prokinetic)

Antidopaminergic - side effects

- **side effects**
 - extrapyramidal
 - ↑ prolactin
 - malign neuroleptic syndrome
 - dizziness
- **contraindications**
 - prolactinoma
 - Parkinson's
- **interactions**
 - can improve absorption

Antidopaminergic - drugs

- **metoclopramide** (Reglan[®] [USA], Maxolon[®] [UK])
 - 10-20 mg p.o., i.m., i.v.
 - crosses BBB
- **itopride** (Ganaton[®] [D], Itax[®] [USA])
 - also some i-ACHE activity
 - better prokinetic
- **cisapride** (Propulsid[®])
 - QT prolongation
 - discontinued
- **alizapride, domperidone** (Motilium[®])
 - do not cross BBB

Antidopaminergic - drugs

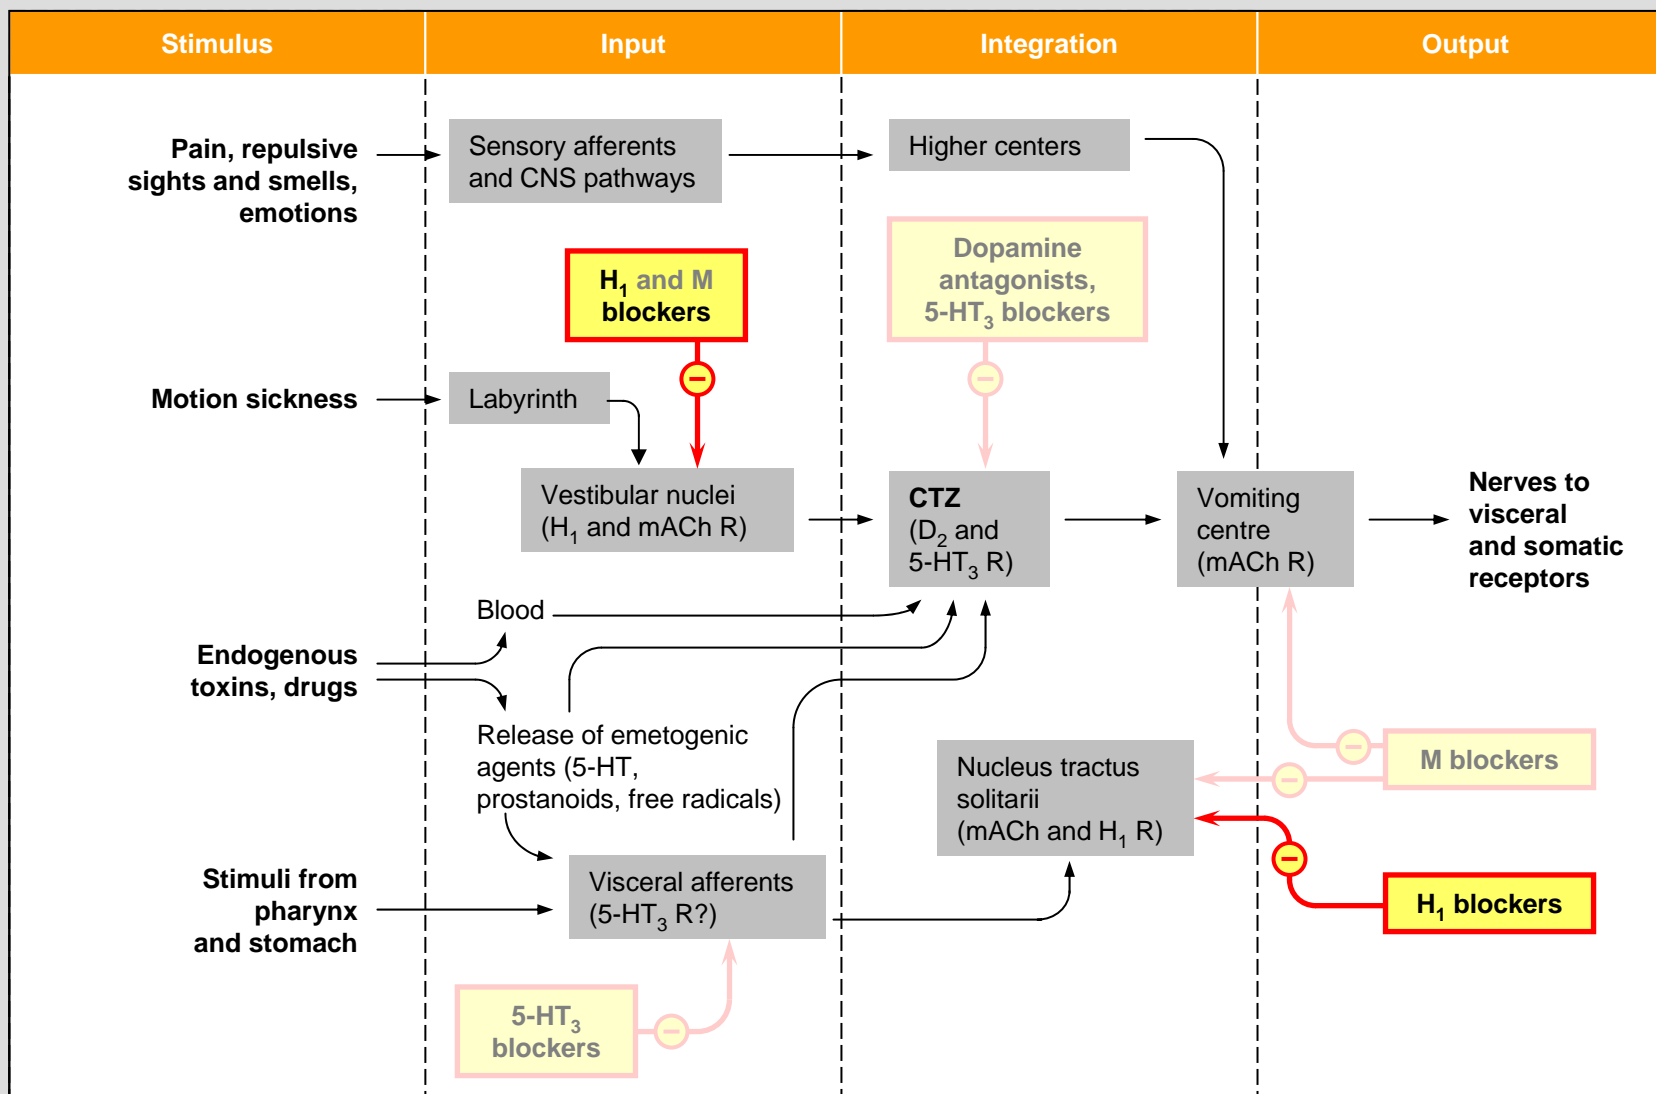

- **antipsychotics**
 - **chlorpromazine**
 - **methotrimeprazine**
 - **perphenazine**
 - **prochlorperazine**
 - **trifluoperazine**
 - **triflupromazine**

Antihistamines

- 1 Introduction - physiology
- 2 Antidopaminergic
- 3 Antihistaminic**
- 4 Anti 5-HT₃
- 5 Antimuscarinic
- 6 Other, Prokinetics & Emetics

Antihistaminic - physiology

Antihistaminic - H₁ receptor blockers

- **mechanisms of action**
 - block vestibular and visceral system
 - also sedative action
 - many have anti M as well
- **indications**
 - kinetosis (motion or sea sickness)
 - gravity
 - Meniér's disease

Antihistaminic - side effects

- **side effects**
 - sedation
 - can mask symptoms of aminoglycoside damage
 - parasympatolytic
 - dizziness
- **contraindications**
 - asthma
 - ileus
- **interactions**
 - i-MAOs

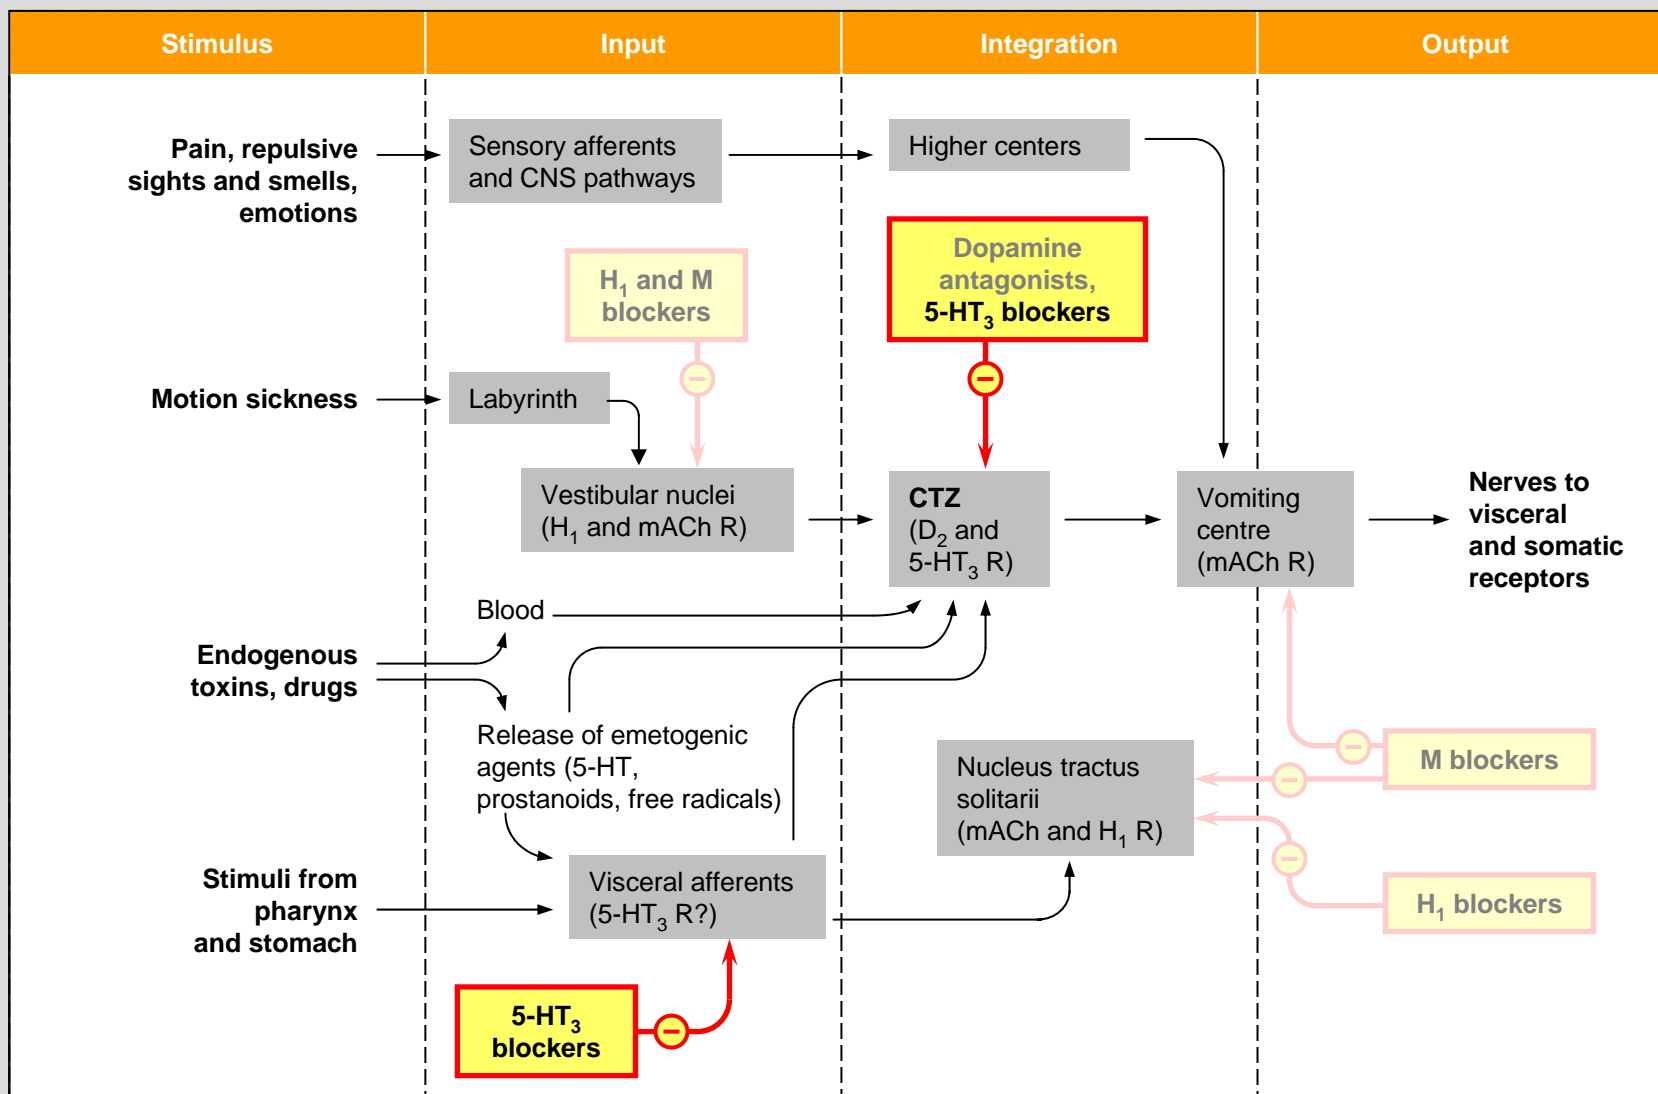

Antihistaminic - drugs

- **dimenhydrinate** (Travel-Gum®)
 - unsuitable for drivers
- **embramine** (Medrin)
 - vertigo
 - Meniér's
- **meclozine (meclizine)** (Antivert®, Bonine®)
 - same as dimenhydrinate

Anti 5-HT₃

- 1 Introduction - physiology
- 2 Antidopaminergic
- 3 Antihistaminic
- 4 Anti 5-HT₃**
- 5 Antimuscarinic
- 6 Other, Prokinetics & Emetics

Anti 5-HT₃ - physiology

5-HT₃ receptor blockers

- **mechanisms of action**
 - serotonine block (mainly in CTZ)
 - very effective
- **indications**
 - chemotherapy N/V (cis-platine)
 - postradiotherapy N/V
 - PONV
 - most other causes

5-HT₃ receptor blockers - side effects

- **side effects**
 - usually mild
 - obstipation
- **contraindications**
 - no info on children and pregnant women
- **interactions**
 - none known

5-HT₃ receptor blockers - drugs

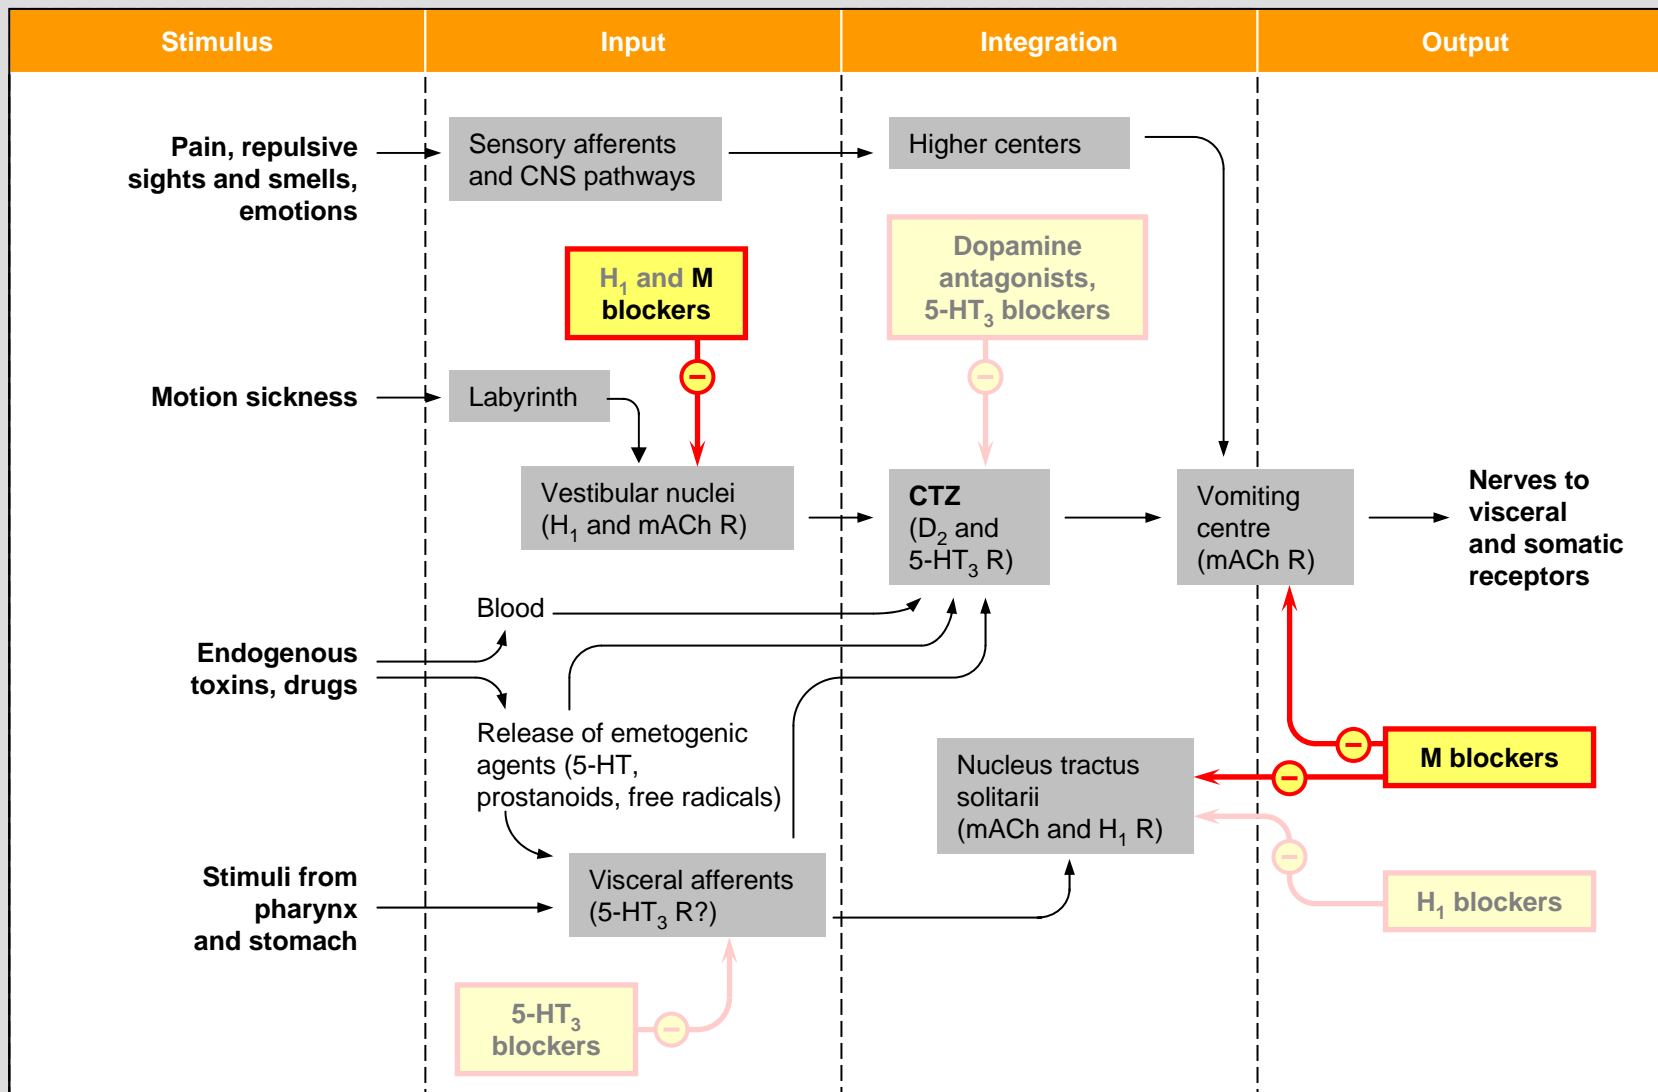

- **ondansetron** (Zofran[®], Ondemet[®])
 - a breakthrough in chemotherapy
 - short T_{1/2} (3 hours)
- **tropisetron, dolasetron**
 - longer T_{1/2}
- **palosetron, granisetron**
 - parenteral application
- beneficial combination with **dexamethasone**
- **alosetron** used in IBS

Antimuscarinic

- 1 Introduction - physiology
- 2 Antidopaminergic
- 3 Antihistaminic
- 4 Anti 5-HT₃
- 5 Antimuscarinic**
- 6 Other, Prokinetics & Emetics

Antimuscarinic - physiology

Antimuscarinic

- mechanisms of action
 - M receptor block
 - mainly vestibular
- indications
 - kinetosis

Brugmansia x insignis

Antimuscarinic - side effects

- **side effects**
 - sedation
 - parasympatolytic
- **contraindications**
 - glaucoma
- MKULTRA project

Antimuscarinic - drugs

- skopolamin (hyoscine)
 - mainly for kinetosis
 - several mg per os
 - today in the form of TTS (0,5 mg)

Antimuscarinic

- 1 Introduction - physiology
- 2 Antidopaminergic
- 3 Antihistaminic
- 4 Anti 5-HT₃
- 5 Antimuscarinic
- 6 Other, Prokinetics & Emetics**

Other

- **NK-1 receptor blockers**
 - aprepitant
 - central action
 - in combination with 5-HT₃ and dexamethasone
- **steroids**
 - dexamethasone
- **BDZ**
 -
- **magnesium**

Prokinetics - summary

- **D₂ blockers**
 - e.g. metoclopramide, itopride
 - GERD, diabetic gastroparesis, radiology
- **iACHE**
 - stigmines
- **motilin**
 - natural substance (erythromycin)

Emetics

- **Tinctura ipecacuanhae**
 - strong emetic
 - deprecated
 - only certain indications
 - not as effective as lavage
- **emetics in small doses**
 - expectorans

Thank you for your attention
